

Our Support For Online Project

Step 1- Synopsis Preparation:

Here students get necessary help to prepare their synopsis

Step 2- Installing the required software:

Here the technical team will help students in setting up their systems with the software and databases required in the project.

Step 3- Designing interfaces and creating database:

Students will be guided in the designing phase, where students will learn to create the database for their system. They will also be guided to design the User Interface for their system.

Step 4- Coding:

In this step the students will learn coding. Here they will learn to write efficient code required in their project

Step5 - Testing Project:

In this step the students will be guided in testing.

Step 6- Implementation of Project:

Next, the students will implement their project.

Step 7- Documentation of Project:

Finally students will be guided to prepare their final documentation.
